

Brainstorming, Idea Generation & Prioritization

1. Project Brainstorming

ShopEEZ aims to resolve standard bottlenecks in local Indian e-commerce pipelines. The initial ideation session resulted in identifying five core improvement features designed to elevate the MVP beyond normal transaction templates.

Proposed Feature	Feasibility	Impact	Tech Layer	MVP Scope
Redux Local Cart Persistence	High	Critical	React 19, Redux Toolkit, LocalStorage	Must-Have (MVP)
Multer Admin Image Uploads	High	High	Express.js, Multer Middleware, Storage	Must-Have (MVP)
18% GST & Shipping Pipeline	High	High	Node.js controller computations	Must-Have (MVP)
SMS Order Alerts via Twilio	Medium	Medium	Node.js, Twilio Rest API Integration	Could-Have (Future)
Personalised Product Carousel	Medium	High	MongoDB aggregate analytics engine	Should-Have (V1.1)

2. MoSCoW Prioritisation Framework

To ensure a fast, robust product cycle, features were prioritised as follows:

- MUST-HAVE: JWT Authentication, customer registration, product filters, persistent cart, address checkout, and admin dashboard metrics with product CRUD.
- SHOULD-HAVE: Product review reviews & star rating submissions, user profile address updating, and visual charts for admin revenue tracking.
- COULD-HAVE: Twilio text alert messages, PDF invoices, and dark mode toggles.
- WON'T-HAVE (NOW): AI-driven recommenders, multi-vendor support.
