

Full Stack Documentation (FSD) Reference

1. Project Description

This document serves as the complete development blueprint for the ShopEEZ e-commerce platform. It captures endpoint routes, parameter structures, and overall software layouts.

2. API Endpoints Catalog

The REST API server exposes the following controllers for auth, products, and checkout actions:

Authentication Controller (/api/auth)

Method	Endpoint Route	Query / Request Parameters	Auth Level
POST	/api/auth/register	{ name, email, password }	Public
POST	/api/auth/login	{ email, password }	Public
GET	/api/auth/profile	JWT Authorization Headers	Private Customer

Product Catalog Controller (/api/products)

Method	Endpoint Route	Query / Request Parameters	Auth Level
GET	/api/products	Query: ? keyword=xyz&category=abc&priceRange=min-max	Public
GET	/api/products/:id	URL Param: id (Mongoose ObjectId)	Public
POST	/api/products/:id/reviews	{ rating, comment }	Private Customer

Checkout & Orders Controller (/api/orders)

Method	Endpoint Route	Query / Request Parameters	Auth Level
POST	/api/orders	{ items, shippingAddress, paymentDetails }	Private Customer
GET	/api/orders/:id	URL Param: id (Order Object ID)	Private Customer
GET	/api/orders/myorders	JWT Authorization Headers	Private Customer

Admin Controller (/api/admin)

Method	Endpoint Route	Query / Request Parameters	Auth Level
GET	/api/admin/metrics	JWT Auth + isAdmin Check	Private Admin
POST	/api/admin/products	Form-Data: name, price, stock, files(Multer)	Private Admin
PUT	/api/admin/orders/:id/status	{ status: "Shipped" / "Delivered" }	Private Admin
