

Problem - Solution Fit Matrix

Mapping Pain Points to Application Features

This matrix details the fit between identified user pain points and the concrete architectural implementations within the ShopEEZ code structure.

Pain Point	Proposed ShopEEZ Feature	Technical Stack Alignment	User Value
User security concerns over credit and passwords	JWT Authentication & Bcrypt hashing	JWT token-based routes, bcrypt hash store in MongoDB	Peace of mind, secure logins.
Loss of shopping selection on browser disconnect	Redux cart slice synchronization	Redux Toolkit + LocalStorage serialisation hooks	Carts are preserved across sessions.
Difficult manual inventory monitoring	Dashboard Stock Alerts	Mongoose database queries checking product stock <= 5	Never run out of popular items.
Uploading multiple product details and photos	Admin file upload page	Multer middleware integration on product POST/PUT routes	Rapid catalog updating.
Confusion over taxes and shipping rates	Itemized pricing details	JavaScript helper computing subtotal + 18% GST + flat shipping	No hidden costs at final step.
