

Define Problem Statements

Core User & Platform Pain Points

During our research, we defined five primary problems encountered by e-commerce shoppers and store operators. The design and implementation of ShopEEZ is directly architected to solve these problems:

Problem Area	Target Impact	ShopEEZ Target Solution
Session Loss & Empty Carts	Customer	Serialised Redux state synchronization with client LocalStorage ensuring shopping cart items remain intact on page refreshes and browser close.
Complex Checkout Forms	Customer	Single-page checkout containing billing form fields, automatic 18% GST calculations, and immediate shipping fee updates.
Fake Products & Trust Barrier	Customer	Restricted review system allowing only authenticated logged-in users to write verified product reviews and submit star ratings.
Admin Dashboard Overhead	Admin	Unified admin platform showcasing counts of orders, revenue totals, products, and automatic highlights of products with low stock (≤ 5 items).
Rupee Currency Formatting	Customer	Indian localization across application, rendering pricing explicitly in Rupees (Rs.) to provide clear regional familiarity.
