

Empathy Map Canvas

Phase: Brainstorming & Ideation

Project: ShopEEZ | Date: June 2026 | Stack: MongoDB · Express · React · Node.js

Persona 1 — The Customer (Rahul, 24, College Student)

"I want to shop quickly from my phone without the app freezing or losing my cart."

Quadrant	Details
Thinks & Feels	Wants a smooth, premium feel. Worried about payment safety. Excited when filters narrow results instantly
Sees	Clean product cards with Rs prices, high-res images, brand tags, and star ratings on a dark theme.
Says & Does	Searches for specific products, filters by price, adds items to wishlist, reviews cart before checkout.
Hears	Friends say "ShopEEZ has a great UI and fast checkout." Reads online reviews praising the seamless experience
Pains	Cart disappears on refresh. Checkout takes too many steps. Unclear stock availability.
Gains	Persistent cart across sessions. Quick 2-step checkout. Real-time stock indicators on product pages.

Persona 2 — The Store Administrator (Sarah, 32, Business Owner)

"I need to update inventory and track orders without learning complex software."

Quadrant	Details
Thinks & Feels	Feels overwhelmed by overly technical admin panels. Wants instant product updates without dev help
Sees	Admin Dashboard with stats cards: Total Products, Total Orders, Revenue (Rs), User Count, Low Stock Alerts
Says & Does	Adds new products via a form, edits prices, changes order statuses, reviews recent transactions.
Hears	"Your product page is outdated." "Customers are asking about order status."
Pains	Cannot update catalog without developer help. No single view for pending orders.
Gains	Full-featured /admin/dashboard with direct CRUD, order status toggles, and user management.
